

CR10

Self service accounting kiosk to add credit to PaperCutMF accounts via cash and card

- Sturdy robust construction
- Decal can be customised
- Accepts coin, note, credit/debit cards
- Works with both HF High Frequency (13,56mhz) and LF Low Frequency (125khz) or magnetic strip cards.
- Door alarm and cash collect reports help with security
- Easy installation of tap and go payment terminals such as the Ingenico iUC180b from Advam
- Very low maintenance and ongoing costs

Built by trusted European manufacturer Cartadis, the CR10 allows users to add money to their PaperCut account. Users can login via proximity/magnetic swipe card or username/password and add credit via cash or credit/debit card. The unit is highly customisable and easy to service with all parts being modular. This provides an advantage over other kiosks as it can be serviced by field technicians and parts are very easy to replace.

easy config

great support

Configuration options

The CR10 autoloader can be configured in your design options such as:

- Coin only with username/password login
- Note reader
- Banknote stacker
- Magnetic swipe or prox card login
- Credit and debit card facility
- Thermal receipt printer

How does it work?

The CR10 is controlled by a powerful Linux based client called a cPad. This communicates directly with its own server software acting as an external wallet. This server must have access to AD and your PaperCut server.

CR10 Specifications
